EML100: EURO Mode to STANDARD Mode

To go from Euro mode to Standard, press and hold the 'SCAN / EXIT' button and the 'LO' / Down Arrow button (▼), then while holding those two buttons press the 'HI' / Up Arrow button (▲). It should say "STANDARD MODE" on the screen. Wait for the unit to return to normal operation (approximately ten seconds), then power off to lock in Standard Mode.

Note: Certain European countries have restricted the use of radio frequencies above 135 kHz such as those assigned to the Water and Power markers. The EML100 is shipped in Euro Mode with Water and Power disabled for this reason, though they are easily enabled again for use outside those parts of Europe where restricted.

Renewed *Vision.* *Innovation* Forward.
